- PostgreSQL (Neon)
- MongoDB
- Axios

LANGUAGES

English
Upper-intermediate

Ukraine
Native

PROJECT EXPERIENCE

Clothica - E-Commerce Platform

2025

Team project

URL: <https://clothica-front.vercel.app>

Project description: A fast, minimalist e-commerce web application for clothing sales with advanced filtering and responsive layout.

Role & Contributions:

- Developed a secure personal dashboard (User Profile) for user account management and data updates.
- Engineered scalable API routes and backend logic for a product review and comment system.
- Implemented a secure newsletter subscription feature with strict data validation using Formik and Yup.
- Optimized global state management using Zustand and managed server communication via Axios.

YachtJet

2025 – 2025

Team project

- URL: <https://samir-shaban-en.github.io/dev-team-web/>
- Project description: Yacht rental service
- Tech stack: HTML, CSS, GitHub
- Role: Developer. Frontend Development: wrote and maintained code using HTML, CSS to create interactive and responsive user interfaces. Worked closely with other developers, the team lead, and the scrum master to ensure project milestones were met.

Books

2025 – 2025

Team project

- URL: <https://d-yv.github.io/project-dev1team/>
- Project description: Booksy is a single-page online bookstore website. Our development team worked on the creation of the Booksy website. Booksy is a single-page online bookstore website that we implemented according to the technical brief and design with Figma. Our goal was to create a modern, fast, responsive website that is convenient for both mobile users and desktop visitors. Therefore, we sought to implement a clean semantic layout, responsive graphics, interactive sliders, and easy navigation.
- Tech stack: HTML, CSS, GitHub, JavaScript
- Role: Developer. Frontend Development: wrote section footer, implemented interactive elements, and ensured cross-browser compatibility.
